

Trend Micro and NETGEAR VPN Firewall

Enhanced Protection Against Viruses, Spam* and Hackers

Problem

Business networks are continually exposed to increasingly sophisticated viruses, worms spam* and hackers. Protecting the network, remote offices and mobile users from these threats can be difficult to manage for the limited IT resources in small and medium businesses. However, inadequately protected computers put network security, business productivity and confidential information at risk.

Solution

Trend Micro™ product suites designed for small and medium businesses (SMB) deliver a powerful, multi-layered defense against viruses, worms, spam* and hackers, to protect mail servers*, file servers, and desktops.

To strengthen that protection, NETGEAR ProSafe VPN Firewall products can now be configured to deny any inadequately protected PC or server's attempt to access the Internet. Then, it triggers an automatic update or install of Trend Micro software for that remote or internal PC, without disturbing the user. After the update, the computer is able to access the Internet, with current Trend Micro protection.

The NETGEAR VPN Firewalls and Trend Micro small and medium business product suites work together to provide an elegant solution that simultaneously reduces risks to business productivity while it lowers the burden to IT. Best of all, the solution is designed with the value pricing, robust protection and efficient management solutions required by small and medium businesses.

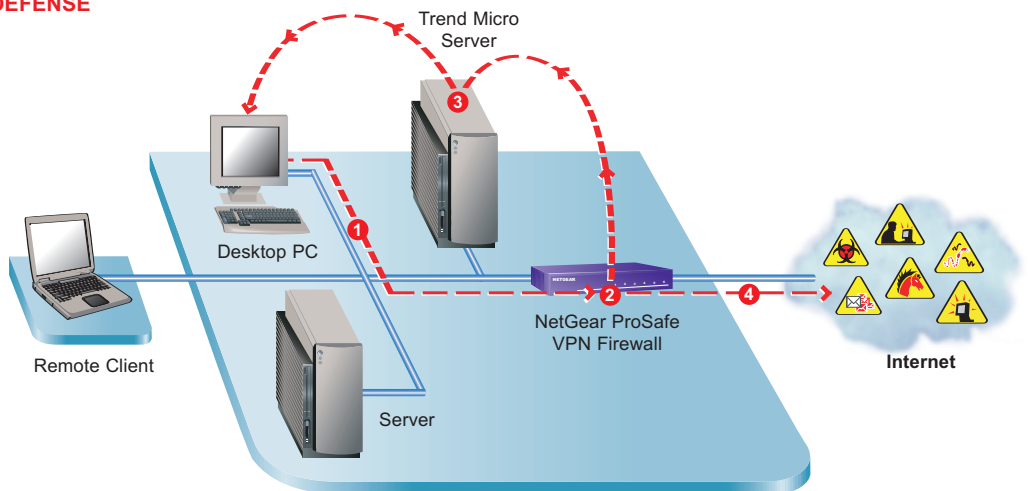

Evaluation copies of Trend Micro Client/Server Suite for Small and Medium Business and Trend Micro Client/Server/Messaging Suite for Small and Medium Business ship with the supported NETGEAR ProSafe VPN Firewall 200 FX538 and ProSafe VPN Firewall 50 FVS338 products for customers without current Trend Micro licenses.

KEY BENEFITS

- **Enhances Protection**
Improves virus, worms, spam* and hacker protection for business networks, mobile users and remote offices
- **Increases Security**
Combined solution can enforce security policy for inadequately protected computers attempting network connection
- **Reduces IT Burden**
Eliminates cost and work by automating policy checks for users that are often hard-to-find and higher risk: mobile users and remote offices
- **Maintains User and Network Productivity**
Helps actively protect network resources with minimal interference to users and system operations

TREND MICRO AND NETGEAR PROTECT WITH LATEST VIRUS, SPAM* AND HACKER DEFENSE

- 1 Internal or remote client or server attempts to connect to Internet.
- 2 NETGEAR VPN Firewall checks to see if Trend Micro Antivirus is installed and is up-to-date. If current, it allows the connection.
- 3 If antivirus is not current, client is re-directed to Trend Micro Client/Server Suite for SMB or Trend Micro Client/Server/Messaging Suite for SMB server to download the latest malware protection.
- 4 Client or server can now connect to the internet or network safely.

* Spam protection available with Trend Micro Client/Server/Messaging Suite for SMB

Trend Micro and NETGEAR VPN Firewall

Enhanced Protection Against Viruses, Spam* and Hackers

Combined solution of Trend Micro and NETGEAR VPN Firewall

- Automates security policy enforcement on computers attempting network connection, enabling more consistent security policy compliance and protection
- Enables ability to block access for inadequately protected or unprotected systems, helping to ensure protection is current
- Improves ability to protect hard-to-track and higher risk computers: mobile users and remote offices

Trend Micro Virus Protection

Included with Client/Server Suite for SMB and Client/Server/Messaging Suite for SMB

- Purpose-built antivirus for small business provides enterprise level protection in a easy-to-manage solution
- Reliable and comprehensive protection helps eliminate viruses, including Trojans, worms and other malicious code threats
- Designed for fast and easy installation to networked desktops, file servers, and email servers from a single, Web-based console
- Automatic transparent updates maintains up-to-date virus protection automatically, without user intervention
- Damage Clean-up Capability helps automatically clean and restore infected systems to original state, reducing system downtime, and cleanup efforts
- Virus Outbreak Monitor initiates updates during outbreaks and proactively monitors network and system activities for early warning on new, unknown threats

Trend Micro Spam Protection

Trend Micro Client/Server/Messaging Suite for SMB provides all of the above with additional spam protection:

- Accurate heuristic anti-spam engine interoperates seamlessly with antivirus solution
- Reduces threats by ability to block suspect file types

NETGEAR VPN Firewall

- Controls access to sensitive applications and data, enables online transactions between your company and its partners and suppliers, and protects intellectual property.
- Shares internet connections with multiple LAN users via routing

TrendLabsSM

Trend Micro products are backed by timely, high-quality service from TrendLabs, a global network of six regional antivirus research and support centers with ISO 9001:2000 and COPC standards certification. A team of more than 700 engineers and antivirus specialists operate around the clock to monitor virus activity, develop information on new threats, and deliver prompt, effective strategies.
